PROFESSIONAL SUMMARY

Software Developer with hands-on experience building full-stack web applications, secure API-driven systems, database-backed business tools, and AI automation workflows. Portfolio includes SentinelAI, an AI-assisted security incident response platform; an enterprise-style employee management application; and an appointment booking system. Proficient in C#, ASP.NET Core, Python (FastAPI/Django), React/TypeScript, JavaScript, SQL, REST APIs, Git/GitHub, automated testing, and LLM workflow integration.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, PHP, Java, HTML, CSS

Frameworks / Web: ASP.NET Core / .NET, FastAPI, Django, React, Node.js, REST APIs, Razor

Data: SQL Server, PostgreSQL, MySQL, Entity Framework Core, SQLAlchemy

AI / Automation: n8n, LLM integration, Groq/Llama, prompt design, structured output parsing

Engineering: Git, GitHub, Docker, GitHub Actions, Pytest, RBAC, WebSockets, CRUD, OOP

Cloud / Tools: Microsoft Azure, AWS fundamentals, Visual Studio, VS Code

PROFESSIONAL EXPERIENCE

AI Engineering Intern — Serael

Jul 2026 – Aug 2026

Remote (Ontario)

- Designed a multi-phase, AI-powered Lead Discovery Agent in n8n to automate business research, qualification, scoring, and structured lead storage.
- Integrated Groq/Llama analysis, HTTP/HTML extraction, structured JSON output, duplicate-prevention and upsert logic, error handling, and a human approval checkpoint before outreach.
- Documented architecture, prompts, setup, and handoff decisions to support maintainability and team adoption.

Technical Support Specialist — TP

Mar 2026 – Jun 2026

Remote (Winnipeg, Manitoba)

- Resolved hardware, software, device, account, and connected-service issues across phone, chat, and email, documenting each resolution in CRM systems.
- Diagnosed root causes, guided users through setup, updates, and backups, and escalated complex issues while meeting high-volume service targets.

Software Developer — TechNova Solutions

Feb 2024 – Jan 2026

Remote

- Developed and maintained full-stack applications using Python/Django, JavaScript, Node.js, and React, including RESTful APIs and database-backed features.
- Worked with SQL Server, MySQL, and PostgreSQL; built responsive front-ends; debugged production issues; and collaborated asynchronously in Agile teams using Git workflows.

SELECTED SOFTWARE PROJECTS

SentinelAI — AI-Assisted Security Incident Response Platform

React • TypeScript • FastAPI • SQLAlchemy • PostgreSQL

- Built a full-stack SOC simulation and incident-response platform with role-based access, secure session management, audit logging, real-time WebSocket updates, incident workflows, analytics, and reporting.
- Implemented deterministic security-event detection and a safe Simulation Lab of 14 fixed, fictional scenarios that exercise the incident pipeline without contacting external targets.
- Designed an evidence-first analyst workflow with investigation states, event timelines, risk signals, and an AI copilot layer that separates observations, hypotheses, recommendations, and limitations.
- Hardened authentication and production configuration with rotating, revocable refresh credentials, JWT validation, account lockout, origin checks, secure-cookie policy, and administrative confirmations.
- Validated the backend with 63 passing tests plus targeted regressions; strict TypeScript checks and frontend session-refresh tests also passed. Documented unverified deployment limitations rather than overstating production readiness.

EmployeeHub — Employee Management System

ASP.NET Core MVC • C# • EF Core • SQL Server • Razor

- Built a database-backed employee management application with create, view, edit, delete, search, and validation workflows using ASP.NET Core MVC and Entity Framework Core.
- Structured the application with MVC separation, database migrations and seeding, and responsive Razor/Bootstrap views for a clean, business-oriented interface.
- Published to GitHub with setup documentation and fictional seed data for safe portfolio demonstration.

Appointment Booker — Appointment Booking System

- Built a portfolio scheduling application covering the end-to-end booking experience, including appointment creation and management workflows.
- Designed as a professional business application with emphasis on usability, input validation, structured data handling, and maintainable application flow.

EDUCATION

Diploma, Software Development — ABM College 2025 – 2026

Edmonton, Alberta

Coursework: C#, Python, .NET, OOP, web development, JavaScript, PHP, SQL/databases, IoT/networking, Microsoft Azure, and AWS.

Bachelor of Arts, Economics — University of Winnipeg 2019 – 2023

Winnipeg, Manitoba
