VICTOR ONYEDIKACHI OKERE

Winnipeg, Manitoba, Canada | 431-336-2658 | okerevic71@gmail.com
Portfolio: victor-portfolio-pied.vercel.app | github.com/benree123 | linkedin.com/in/victor-okere-124860272

PROFESSIONAL SUMMARY

Software Developer with hands-on experience building full-stack web applications, secure API-driven systems, database-backed business tools, and AI automation workflows. Portfolio includes SentinelAI, an evidence-first security incident response platform; Prairie Bookings, an appointment system with concurrency-safe scheduling; and EmployeeHub, an employee management application. Proficient in C#, ASP.NET Core, Python (FastAPI/Django), React/TypeScript, JavaScript, SQL, REST APIs, Git/GitHub, automated testing, and LLM workflow integration.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, PHP, Java, HTML, CSS

Frameworks / Web: ASP.NET Core / .NET, FastAPI, Django, React, Node.js, REST APIs, Razor

Data: SQL Server, PostgreSQL, MySQL, Entity Framework Core, SQLAlchemy

AI / Automation: n8n, LLM integration, Groq/Llama, prompt design, structured output parsing

Engineering: Git, GitHub, Docker, GitHub Actions, Pytest, integration testing, RBAC, WebSockets, CRUD, OOP

Cloud / Tools: Microsoft Azure, AWS fundamentals, Visual Studio, VS Code

PROFESSIONAL EXPERIENCE

AI Engineering Intern — Serael Jul 2026 – Aug 2026

Remote (Ontario)

- Designed a multi-phase, AI-powered Lead Discovery Agent in n8n to automate business research, qualification, scoring, and structured lead storage.
- Integrated Groq/Llama analysis, HTTP/HTML extraction, structured JSON output, duplicate-prevention and upsert logic, error handling, and a human approval checkpoint before outreach.
- Documented architecture, prompts, setup, and handoff decisions to support maintainability and team adoption.

Technical Support Specialist — TP Mar 2026 – Jun 2026

Remote (Winnipeg, Manitoba)

- Resolved hardware, software, device, account, and connected-service issues across phone, chat, and email, documenting each resolution in CRM systems.
- Diagnosed root causes, guided users through setup, updates, and backups, and escalated complex issues while meeting high-volume service targets.

Software Developer — TechNova Solutions Feb 2024 – Jan 2026

Remote

- Developed and maintained full-stack applications using Python/Django, JavaScript, Node.js, and React, including RESTful APIs and database-backed features.
- Worked with SQL Server, MySQL, and PostgreSQL; built responsive front-ends; debugged production issues; and collaborated asynchronously in Agile teams using Git workflows.

SELECTED SOFTWARE PROJECTS

SentinelAI — Evidence-First Security Incident Response Platform

React • TypeScript • FastAPI • SQLAlchemy • PostgreSQL • Docker • GitHub Actions

Live demo | github.com/benree123/sentinelai

- Built and deployed a full-stack SOC simulation and incident-response platform with a one-click guest demo, four backend-enforced roles, revocable sessions, audit logging, real-time WebSocket updates, incident workflows, analytics, and reporting.
- Implemented eleven deterministic detection rules and a safe Simulation Lab of 14 fixed, fictional scenarios that exercise the incident pipeline without contacting external targets.
- Designed an analyst workflow with investigation states, event timelines, risk signals, and a labelled evidence assistant that cites linked events and separates observations, hypotheses, recommendations, and limitations; includes an optional local Ollama adapter with a deterministic fallback.
- Hardened authentication with rotating, revocable refresh credentials, JWT validation, account lockout, origin checks, secure-cookie policy, and administrative confirmations.
- Verified through GitHub Actions: 78 backend tests on each of SQLite and PostgreSQL, frontend tests, production build, dependency audits, and a Docker/PostgreSQL runtime check.

Prairie Bookings — Appointment Booking System

C# • .NET 10 • ASP.NET Core Minimal APIs • EF Core • SQL • JavaScript • Docker • GitHub Actions

Live demo | github.com/benree123/prairie-bookings

- Built a full-stack booking application with advisor availability, time-zone-aware weekday scheduling, server-side validation, and cancellation through private references stored only as SHA-256 hashes.
- Prevented double-booking under concurrent requests with a filtered unique SQL index, so one request succeeds (HTTP 201) and the other receives a conflict (HTTP 409), avoiding a check-then-insert race.
- Added a password-protected staff workspace with cookie authentication, rate limiting, cross-site request protection, appointment filters, and advisor time blocking.
- Covered customer and staff flows with API integration checks, including concurrent booking scenarios, and deployed a one-click staff demo in Docker that hides other visitors' details.

EmployeeHub — Employee Management System

C# • .NET 10 • ASP.NET Core MVC • EF Core • SQL Server • Razor • xUnit • Docker

Live demo | github.com/benree123/EmployeeHub

- Built a database-backed employee directory with create, view, edit, delete, search, sorting, and paging in a bordered data grid.
- Added cookie-based sign-in with Admin and Viewer roles, restricting record changes and salary visibility to authorized users.
- Enforced validation for duplicate emails, future hire dates, and field lengths, with EF Core migrations for SQL Server.
- Verified with 16 xUnit integration tests on SQLite and SQL Server in GitHub Actions, and deployed a resetting public demo with fictional data.

EDUCATION

Diploma, Software Development — ABM College 2025 – Jul 2026

Edmonton, Alberta

Coursework: C#, Python, .NET, OOP, web development, JavaScript, PHP, SQL/databases, IoT/networking, Microsoft Azure, and AWS.

Bachelor of Arts, Economics — University of Winnipeg 2019 – 2023

Winnipeg, Manitoba
